

# ART Lite INVENTORY MANAGEMENT SYSTEM

BALANCING YOUR BULK BRILLIANTLY

### The ART Lite inventory management system:

ART Lite is the new, cost effective, inventory management system developed by Ronin Grain Management Solutions to balance your bulk brilliantly. ART Lite offers the user an interactive page to capture bin measurements for stock taking. This custom designed software is programmed to the relevant site dimensions and layout. By obtaining a distance reading from the top of the bin to the grain surface, ART Lite calculates the occupied volume. This volume is calculated as a result of historic movements into the bin as well as predictions. Transactional data and dip measurements are balanced on a daily basis within the ART Lite database. All this information is available to the operator on a user friendly excel platform.

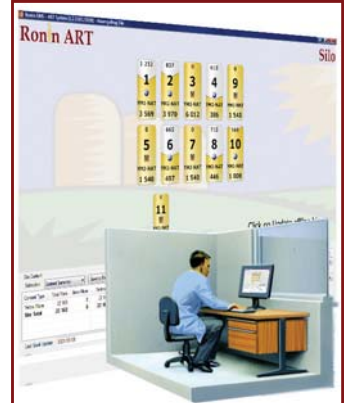

Art Lite is perfect for use in Silos. Information is manually obtained by an operator.

A laser range finder is used to obtain the stock levels. This is done manually by an operator.

The information obtained by the use of the laser range finder is entered via the ART Lite interface

The information entered is translated by the ART Lite proprietary software and reflected via a graphic user interface

### The ART Lite system offers the following benefits to clients:

- Daily reconciliations between physical stock and stock on book
- Site operating times with manager log-on and log-off function.
  - A control for overtime worked on site.
- Surplus / Shortage management and deciding when to sell or buy.
- Determination of statistics like available capacity, bin occupation and fumigation history.
- An easy accessible database with stock reports available in Excel and Lotus formats.
