

GAC[®] 2100 GRAIN ANALYSIS COMPUTER

IT ALL STARTS HERE

The *GAC[®]2100 B is the U.S. federal and industry standard by which all moisture testers are measured.

The same expertise and technology is now available in South-Africa for commercial use at grain silos and processing plants.

*GAC2100b NTEP version - Chosen by the USDA - GIPSA as the federal standard grain moisture analyser for trade.

SPECIFICATIONS

OPERATING TEMPERATURE:
10-40°C (50-140°F)

HUMIDITY:
5 TO 95% (Non-condensing)

POWER SUPPLY:
85 -264 VAC, 48-62Hz

DIMENSIONS (HxWxD):
37,5cm X 38,7cm X 40,6cm
(14x7" X 15.25" X16")

WEIGHT:
11,8Kg (26Lbs)

Applications:
Corn, Soybeans, Wheat, Barley,
Sorghum, Cereal grains, Oilseeds, Beans

FEATURES

- Measures moisture with a repeatability of ± 0.1 (depending on conditions)
- 16 second analysis time
- Consistent measurement and display of test weight and temperature
- Stores up to 64 calibrations
- More than 450 product calibrations available
- Automatic weighing
- Automated moisture and temperature compensation
- Use for cereals, oilseeds, grass seeds, vegetable seeds, and beans
- Two RS232 ports
