Grain Management Solutions

40 & 42 High Street  
P O Box 556  
Modderfontein  
1645

The AgriCheck Analyzer is used by Grain Handling Companies for the determination of an unlimited number of constituents within grain and oilseeds.

This cost effective instrument was designed by keeping customer needs in mind. By fixing the path length, the customer can now obtain an instrument that is product specific.

Grain handling facilities that only trade in one grain type, for example, wheat millers, maize millers as well as grain silos within certain geographical areas, can now benefit by having a product specific analyzer. In addition, all products that are analyzed within the same path length can be analyzed on this unit.

For example:

- Wheat, Barley, Oats, Rice and Sorghum can be measured on a single instrument.
- Maize, Soya, Dry beans and Peas can be measured on a single instrument.
- Mullet seed and Manna can be measured on a single instrument.

Whole Grain and Seed Analyzer  
NIR Transmission  
Color-Display  
Touchscreen  
Automatic wavelength calibration  
Analysis-time ~ 30 sec.  
24 month warranty  
USB, COM, parallel ports  
and network possibilities
